Appalachian Storage Hub: What is needed to store and maximize the regional development and use of NGLs?

Brian J. Anderson
Director, The WVU Energy Institute
GE Plastics Material Engineering Professor
Chemical Engineering

IOGCC Annual Meeting
Pittsburgh, PA
October 02, 2017
Mission
To promote, coordinate and expand the vital impacts and value of West Virginia’s energy assets and capabilities for the people of West Virginia, the mid-Appalachian region, the nation and world

Vision
By serving as a catalytic hub, continually discovering and developing transformational pathways connecting WVU energy researchers, programs, facilities, capabilities and students/workforce entrants with the future of energy

2025 Goals

(A) Expand the Portfolio
Strategically drive, enable and guide expansion of WVU’s energy research portfolio to $60m annually by 2025 in coordination with the needs of policy makers and industry

(B) Promote Development
Promote economic development within West Virginia and the region by aligning West Virginia’s energy assets with the emerging needs, directions, and challenges of the energy sector

(C) Elevate the Workforce
Elevate West Virginia’s workforce by aligning, coordinating, and expanding opportunities through interdisciplinary energy academic programs and initiatives
Broad Areas of Energy Research

- **Fossil Energy**: Promote the efficient use of fossil resources, conversion, extraction, utilization, and environmental management

- **Sustainable Energy**: Promote energy efficiency, alternative fuels, conservation, renewable energy sources, geothermal, and sustainable and responsible development

- **Energy Policy**: Analyze energy policies, and their impact on use of these resources, carbon management, environmental, and infrastructure

- **Environmental Stewardship**: Ensuring that energy production is balanced with minimizing negative impacts to our air and water resources
WVU Mountain of Excellence in Natural Gas Utilization - Opportunities

• WV – a long history in NG to chemicals
  – Clendenin, WV: Site of the world’s first commercial ethylene plant

• Upstream:
  – resource evaluation,
  – management, and
  – production

• Downstream:
  – use as an alternative transportation fuel
  – conversion to liquid fuels or chemicals
  – use in fuel cells

- Union Carbide 10,000 lb/day ethylene plant online in 1921
- Driven by access to raw materials
The objective of the Marcellus Shale Energy and Environment Laboratory (MSEEL) is to provide a long-term collaborative field site to develop and validate new knowledge and technology to improve recovery efficiency and minimize environmental implications of unconventional resource development.

Natural gas advantage

Futures markets indicate that market expect the crude-to-gas ratio to remain between 15X and 17X for most of the next decade.

The “true” BTU ratio of WTI crude to natural gas of 5.8 MMBtu/Bbl.

  - Capito (R-WV)
Regional Cooperation – Congressional Action

H.R.2568 and S.1075 - Appalachian Ethane Storage Hub Study Act

To direct the Secretary of Energy and the Secretary of Commerce to conduct a study of the feasibility of establishing an ethane storage and distribution hub in the United States.

In general.—The Secretary of Energy (referred to in this section as the “Secretary”) and the Secretary of Commerce, in consultation with other relevant Federal departments and agencies and stakeholders, shall conduct a study of the feasibility of establishing an ethane storage and distribution hub in the Marcellus, Utica, and Rogersville shale plays in the United States.

The study conducted shall include—

(1) an examination of, with respect to the proposed ethane storage and distribution hub—

(A) potential locations;
(B) economic feasibility;
(C) economic benefits;
(D) geological storage capacity capabilities;
(E) above-ground storage capabilities;
(F) infrastructure needs; and
(G) other markets and trading hubs, particularly hubs relating to ethane; and

(2) the identification of potential additional benefits of the proposed hub to energy security.

Publication of results.—Not later than 2 years after the date of enactment of this Act, the Secretary and the Secretary of Commerce shall—

(1) submit to the Committee on Energy and Commerce of the House of Representatives and the Committees on Energy and Natural Resources and Commerce, Science, and Transportation of the Senate a report describing the results of the study under subsection (a); and

(2) publish those results on the Internet websites of the Departments of Energy and Commerce, respectively.
Impact of Shale Production on the Chemical Industry

• According to American Chemistry Council (ACC) estimates, as of September 2015 companies from around the world have announced 246 projects and $153 billion in potential capital investments in U.S. chemical-processing facilities (ACC, 2016), up from 97 projects and $72 billion as of March 2013 (ACC, 2013).

• Largely as a result of the shale gas boom, U.S. jobs related to plastics manufacturing alone are expected to grow by 462,000, or more than 20 percent over the next decade (ACC, 2015a).

Estimated Ethane Supply and Announced Demand

*Mariner West (MW): 50 MBPD (4Q13)*

*Mariner East (ME): 23 MBPD (4Q15) 91 MBPD (1Q17)*

**Total: 115 MBPD**

*Appalachian Supply: 480 MBPD (August, 2015)*

*ATEX (AX): 65 MBPD (1Q14) 60 MBPD (Future)*

**Total: 125 MBPD**

*Steam Crackers*:
  - Shell: 105 MBPD (2019)
  - PTTGC: 65 MBPD (2020)
  - Braskem: 65 MBPD (2021)
  **Total: 235 MBPD**

August 2015 it is estimated that 350 MBPD was rejected — the announced demands/off takes will provide a relevant “frac” spread for the Appalachian Basin with the majority of ethane leaving the region (Europe, Texas, Canada)
Ethane Product Streams

**Intermediates**
- Low density polyethylene (LDPE) and linear low density polyethylene (LLDPE)
- High density polyethylene (HDPE)
- Ethylene dichloride
- Ethylene oxide
- Ethylbenzene
- Linear alcohols
- Vinyl acetate

**Consumer Products**
- Food packaging, film, trash bags, diapers, toys, housewares
- Water pipe, housewares, crates, drums, bottles, food containers
- Siding, window frames, swimming pool liners, pipes
- Automotive antifreeze
- Pantyhose, clothing, carpets
- Bottles
- Models, cups
- Instrument lenses, housewares
- Carpet backing, paper

60% Ethane → Ethylene
Appalachian Basin NGL Storage Study

- Geologic investigation of subsurface storage potential for NGLs in a broad geographic area
- Study area is along the Ohio River, from PA to southern WV and eastern KY
- Project is a critical step in the process of infrastructure development
- Subsurface storage facilities with adjacent
- Surface NGL transportation
- Goal of this project: to provide essential data to support of the development the chemical manufacturing industry, promoting economic development
Stratigraphic Units Investigated

- Greenbrier Limestone
- Salina salt beds
- Mississippian sandstones (Keener to Berea)
- Upper Devonian sandstones (Bradford, Venango, Elk)
- Oriskany Sandstone
- Clinton – Medina through Tuscarora Sandstone
- Upper Sandy Member of the Gatesburg Formation
- Rose Run Sandstone
Types of Potential NGL Storage

• Solution mining to create large cavities in Salina salt beds
• Subsurface excavation to create large mines in Greenbrier Limestone
• Injection into depleted gas fields with good porosity & permeability
• Vertical & lateral seals essential for each option

Schultz and Vereide, O&G Journal, 2017

Appalachian Storage Hub – Central Prospect
Appalachian Storage Hub – South Prospect
Conclusion

• There is an abundance of natural gas (containing NGLs) in the shales of the U.S.
  – NGL production from the Appalachian Basin has increased tenfold over this time, from a baseline of under 30,000 bbl/day to nearly 400,000 bbl/day in 2016.

• The Appalachian Basin provides 1) access to markets, and 2) a competitive pricing advantage due to the abundance of valuable (yet currently underpriced) hydrocarbons
  – Transportation costs for transporting ethane via pipe from the Appalachian Basin to Mont Belvieu is approximately $0.16/gal, while the cost for rail transportation of propane is $0.30/gal. The current Mont Belvieu prices for ethane and propane are $0.21/gal and $0.43/gal

• Ethane storage is key to the development of a robust NGLs trading post, i.e. a spot market essential to further development of the chemical manufacturing industry in this region

• A storage facility will be tied into the overall play via massive piping infrastructure

• The U.S. and Mid-Atlantic Region would benefit from infrastructure development to satisfy the feedstock and offtake requirements for world scale and/or distributed manufacturing elements
The WVU Energy Institute

The Institute’s mission is to coordinate and promote University-wide energy research in engineering, science, technology, and policy.

With an emphasis on
- **Fossil Energy**
  - Coal, Oil, and Natural Gas
- **Sustainable Energy**
  - Biomass, Geothermal, Wind, and Solar
- **Energy Policy**
  - Energy and Environmental Policy
- **Environmental Stewardship**
  - Protecting our Air and Water Resources
